Subject: Approval & Conditional Sign-Off: Phase 1 Project Cost Proposal (OBN-CP1-2026-V1)

Dear Team,

Thank you for submitting the Phase 1 Project Cost Proposal. We have reviewed the document and appreciate the strategic pivot to a Vercel and Supabase architecture, which aligns well with our immediate scaling requirements.

We are prepared to approve the full requested Development Budget of ₦777,600 and the Infrastructure Budget of ₦130,444 without negotiation. However, to formalize this sign-off and ensure a fully functional launch, we require the following technical directives and lightweight scope additions to be integrated into the current milestones.

1. Scope Addition: Front-End Gateway & DNS Configuration

Before a user hits the WhatsApp OTP sign-in and the listing form pipeline, the base domain must resolve to a simple, mobile-responsive static landing page.

- **The Landing Page:** We require a clean, single-page static asset that includes a brief "About Us" section explaining our mission as a digital advertising and declutter platform, alongside a clear Call-To-Action (CTA) button that routes users to the extended Listing Cloud URL.
- **Email Configuration:** We require the standard DNS records (MX, TXT, etc.) to be configured on the domain for Zoho Mail, allowing us to handle official business communications.

If you can include this lightweight front-end gateway within the current timeline and budget, we will consider the Phase 1 scope fully finalized.

2. Technical Directives for the Listing Cloud

- **Client-Side Media Compression:** To protect the Supabase storage limits and prevent Vercel server timeouts, all media compression must be handled client-side (in-browser) using libraries like FFmpeg.wasm or browser-image-compression before the files are uploaded to our database.
- **Infrastructure Rollout:** The transition to Vercel Pro and Supabase Pro must occur exactly at the start of Milestone 2, before any live beta data enters the system.

3. Dynamic Regional Routing & Role-Based Access Control

To properly execute the regional data segregation for the admin review dashboards, the system architecture must support unique routing logic and strict data privacy protocols.

- **Unique Admin Referral Links:** Every registered admin must automatically be assigned a unique listing URL or referral code (e.g., www.obnn.com/list?ref=AdminID). Any listing generated through an admin's specific link must bypass general routing and be assigned directly to their personal administrative dashboard.
- **Shared Regional Pool & Data Masking:** All approved listings must populate on a shared regional dashboard so that any local admin can advertise the region's overall inventory. However, strict data masking must be applied at the database level. The personal contact details and identity of the lister must be locked and exclusively visible to the specific "admin in charge" whose link was used.
- **Sales Consent & Global Override:** Sales of cross-promoted products remain under the jurisdiction of the admin in charge. To prevent operational bottlenecks, the system must include a Global Admin tier. Global Admins must have absolute override capabilities to view all masked personal details and reassign listings in the event a regional admin goes Missing In Action (MIA) or if a dispute requires mediation.
- **Admin Revocation & Blacklist Protocol:** The development team must build a Global Admin management interface to instantly revoke access for retired agents. When an admin's service is no longer required by OBN NATION, we must be able to blacklist their profile. This protocol must permanently disable their login capabilities and WhatsApp dashboard access to prevent them from returning to the platform or impersonating the brand in the future.

4. Post-Launch SLA Request

Understanding that the current recurring budget of ~~₦~~88,934/month strictly covers utility and hosting costs, we would like you to submit a separate, optional Post-Launch SLA Retainer quote. Please provide a fixed monthly rate for 5–10 hours of technical support and bug fixing once the platform is live.

Please confirm if these additions and directives are acceptable. Once confirmed, we will release the initial funds and clear you to commence Milestone 1.

Best regards,

A.I.G.
Acting Chief Technology Officer
